Chainsaw Inspection WLC 2026 Slovenia

For reasons of time and organisation, the ialc will carry out the chainsaw inspection as follows:

- Marking (vignette) of the engine block, sprocket cover and mounted bars, and inspection of safety devices: throttle lock, chain brake, chain catch bolt and tooth length before the start of the first discipline (felling and chain change).
The marking stickers are numbered and are issued per start number. The form with the sticker numbers must be carried and presented during inspections. (The form will be handed out during the chainsaw inspection.)
- Comparison of the standardisation of the assembled parts
- Randomly selected participants will be checked throughout the WLC in accordance with the form (chainsaw inspection report)
- The completed and signed form (chainsaw inspection report) must be carried and presented during an inspection.

Kind regards
